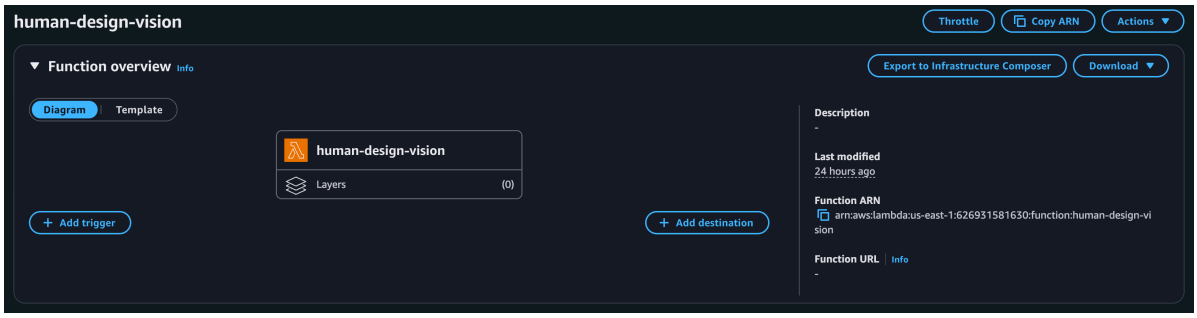
# Week 2

## Week 2 Status Update — Phase 2

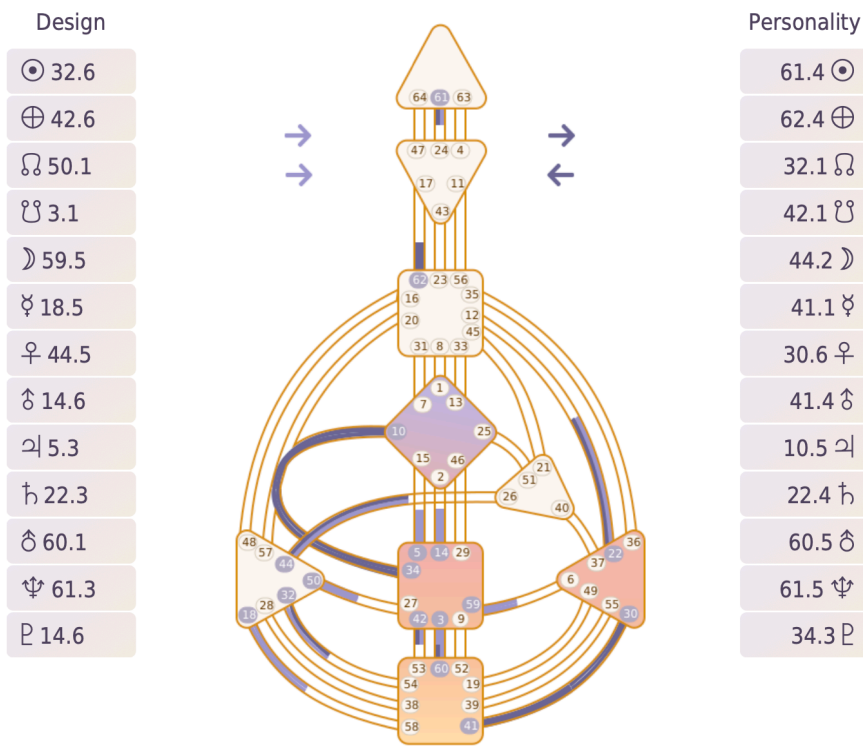
### Phase 2: Vision Extraction

#### What was completed

- Built a **Lambda Function** that accepts a base64-encoded BodyGraph chart image



- Lambda calls the **Anthropic Claude Sonnet API** (multimodal) with the image and a structured prompt



- Claude extracts chart properties and returns structured JSON (`chart_data`):
  - Type (e.g., Generator, Projector)
  - Authority (e.g., Sacral, Emotional)
  - Profile (e.g., 4/6, 3/5)
  - Defined Centers (e.g., Sacral, Throat, Solar Plexus)
  - Active Channels (e.g., 34-20)

```
with open("/home/ec2-user/SageMaker/test1.png", "rb") as
f:
    img_b64 = base64.standard_b64encode(f.read()).decode
("utf-8")

lambda_client = boto3.client("lambda", region_name="us-eas
t-1")

response = lambda_client.invoke(
    FunctionName="human-design-vision",
```

```
    InvocationType="RequestResponse",
    Payload=json.dumps({
        "image": img_b64,
        "media_type": "image/png"
    })
)

result = json.loads(response["Payload"].read().decode("utf
-8"))

'''
{'statusCode': 200,
 'headers': {'Content-Type': 'application/json'},
 'body': '{"success": true, "chart_data": {"type": "Genera
tor", "authority": "Emotional/Solar Plexus", "profile":
"1/3", "strategy": "To Respond", "definition": "Single",
"defined_centers": ["Throat", "G/Self", "Sacral", "Solar P
lexus/Emotional", "Root"], "undefined_centers": ["Head",
"Ajna", "Heart/Will/Ego", "Spleen"], "active_channels":
["14-2", "34-57", "27-50", "41-30"]}}'}
'''
```

- API Key stored in Lambda environment variables
- Tested successfully with sample BodyGraph images

**Services used:** Lambda, Anthropic Claude Sonnet API
